

Group Component

1. Introduction

1.1 Project Background

Detail explanation on the project background, it can be in terms of the following:

- Brief explanation on the types of software chosen for the to be develop system.
- Brief explanation on the reasons why the owner wants to have the online business.
- Brief explanation on what kind technology that will be implement in the propose system.

1.2 Objectives

- List all the possible objectives for this project.

1.3 Scopes

- List all the possible scopes for this project.

2. Planning and requirements analysis

2.1 Explanation of the software process.

- Explain all **FOUR (4)** main activities in software process and relate the implementation of the activities to the case study. To document the software process, refer to Week 2 – Software Process (Part 1), slide. 5 - 19 – as your guideline.

2.2 Gantt Chart

- The content of the Gantt Chart will be based on the tasks given in the assignment. Use any tools that you prefer.
- Include the group workload matrix, MS Team > Files > Assignment > ISWE – Group Workload Matrix.xlsx.

2.3 Functional and Non-functional Requirements

2.3.1 Functional Requirements

- List all the possible functional requirements of the proposed system. To document the functional requirements, refer to, Week 6 – Requirement Engineering (Part 1), slide. 11 – as your guideline.
- Place the requirements into a table.

2.3.2 Non-functional Requirements

- List all the possible non-functional requirements of the proposed system. To document the non-functional requirements, refer to, Week 4 – Requirement Engineering (Part 1), slide. 20 – as your guideline.

3. Logical Design (Part 1)

3.1 Use Case Diagram

- Draw the Use Diagram for propose system. Refer to, Week 6 – System Design (Part 1), slide. 11 – 17 – as your guideline. Provide an explanation for the diagram.

3.2 Class Diagram

- Draw the class diagram for the proposed system, refer Week 7 – System Design (Part 2), slide. 13 – 20 – as your guideline. Provide explanation for the diagram.

** To draw the diagram, you can use any prefer software tools. Some of the suggestions, MS Visio or draw.io

4. Physical Design – divide the interface according to interface related to an actor.

- Design the interface using wire-frame design.
- Provide brief explanation to each interface design.

5. Implementation

5.1. Hardware Requirements

- List all the hardware needed to develop and operated the proposed system.
- Provide specification for each hardware mentioned.
- Place it in a table.

5.2. Software Requirements

- List all the software needed to develop and operated the propose system.
- Provide specification for each software mentioned.
- Place it in a table.

6. Prototype - divide the interface according to interface related to an actor.

- Provide the complete interfaces of the prototype.
- Provide explanation on how to use each interface.
- Use any prototyping tool according to your preference.

7. Conclusion

7.1. Limitation

- Explain the limitation of the proposed system.

7.2. Challenges

- Explain challenges in developing the proposed system.

7.3. Further enhancement

- Explain any future suggestion for the proposed system enhancement.

Individual Component

1. Logical Design (Part 2)

- Choose **TWO (2)** use cases from the Use Case Diagram provided in Logical Design (Part 1).
- Draw the Activity Diagram, for each use case. Refer to Week 7 – System Design (Part 2), slide. 5 – 11 – for guideline.
- Provide explanation for each diagram.

****Every member must choose different use cases to be transform into activity diagram.**

**** To draw the diagram, you can use any prefer software tools. Some of the suggestions, MS Visio or draw.io**

2. Methodology

2.1 Introduction of the methodology

- Brief introduction of the methodology.

2.2 Implementation of the methodology to the case study.

- Explain the implementation of each phase of the methodology to the case study – provide the content in paragraph, separate the paragraph according to the phases.

2.3 Advantages and disadvantages of the methodology

- List the advantages and disadvantages – provide the content in point form.

2.4 Justification of the chosen methodology

- Explain the justification, by relating the advantages of the chosen methodology to the case study – provide the content in paragraph – one paragraph will be sufficient.

3. Testing

3.1 Testing Method

- Choose between black box testing and white box testing.
- Explain the chosen testing method.

3.2 Test Script

- Based on the activity diagrams provided in Logical Design (Part 2), prepare the test script.
- Use the template provided in MS Team > Files > Assignment > Test Script.xlsx

-The End-
